OBJECTIVE

Analytical Data Scientist and engineering graduate skilled in Python, SQL, and modern AI frameworks. Experienced in building predictive models, GenAI solutions, and BI dashboards that turn complex data into actionable insights. Seeking to contribute technical expertise and problem-solving ability to drive innovation and measurable business outcomes.

SKILLS

Programming & Databases: Python, SQL
Machine Learning & AI: Scikit-Learn, TensorFlow, Keras, Ensemble Modeling, CNN, Transfer Learning, Unsupervised Learning
Generative AI: LangChain, Retrieval-Augmented Generation (RAG), Vector Databases
Data Analysis: Pandas, NumPy, Feature Engineering
Visualization & BI Tools: Power BI, Streamlit, Matplotlib, Seaborn, Plotly, Excel

EDUCATION

B.Tech in Computer Science | B K Birla Institute of Engineering Technology, Pilani (2025)

PROJECTS

CodeScope AI: GitHub Repository & Multi-File Codebase Assistant | Generative AI & LLMs

- *Developed RAG-powered assistant for GitHub repos; improved code search precision with FAISS indexing.*

(Python, LangChain, Streamlit, FAISS, Google Gemini, Groq, PyGithub)

- Ingested GitHub repositories via PyGithub to auto-generate executive README briefs and multi-file architectural summaries, mapping cross-file dependencies and end-to-end data flows.
- Built RAG-powered conversational interfaces for querying README documentation and multi-file code logic.
- Designed dense vector indexing with FAISS and structured metadata for high-precision cross-module code search.
- Integrated Gemini and Groq with guardrails against prompt injection, plus real-time evaluation tracking latency, token usage, faithfulness, and hallucination rates.

Olist E-Commerce Analytics & Predictive Modelling | Data Science & ML

- *Delivered customer behavior insights and predictive freight pricing; built BI dashboards for logistics KPIs.*

(Python, Pandas, Scikit-Learn, MySQL, Matplotlib, Seaborn, Power BI)

- Analysed Brazilian e-commerce orders across 9 relational tables to uncover drivers of customer satisfaction, delivery delays, and revenue trends.
- Executed data cleaning, SQL joins, cohort analysis, and RFM segmentation to classify customer purchasing behaviours.
- Trained and tuned Random Forest/XGBoost ml models for Shipping Freight Price Predictor, optimized with cross-validation.
- Designed interactive Power BI / Streamlit dashboards tracking logistics KPIs, AOV, and regional seller performance.

Age & Gender Prediction System | Deep Learning & Computer Vision

- *Built CNN model with 90%+ accuracy; deployed via Streamlit for real-time inference.*

(Python, TensorFlow/Keras, OpenCV, CNN, Streamlit, Scikit-Learn)

- Engineered an end-to-end multi-task CNN to predict age (regression) and gender (classification) simultaneously from facial imagery.
- Pre-processed and augmented facial images (UTKFace dataset) to improve generalization.
- Applied transfer learning achieving 90%+ gender classification accuracy and age prediction MAE approx 4 years.
- Built and deployed an interactive Streamlit web app enabling real-time inference via webcam and image uploads.
